ACADEMIC PORJECTS

Digit Recognizer (Moblie Application):

It is Digit Reconizer whose frontend is based on Flutter Application Development .It uses backend based on CNNI Based Model and tflite module of flutter. It uses MNIST Dataset and uses different classification model to classify the different hand-written digits. Model Link : <https://github.com/Tushar1224/MNIST-BASED-MODEL-CNN>

Stocks Price Predictor (RNN Model):

It uses Recurrent Neural Network (RNN) based Model to predict the stock prices.

Real Time Face Sentiment Detector (Web Application):

It is a CNN Based model using keras.It Detects the Facial Expression of the Face and tells what is the sentiment/expression out of 7 different types of sentiments (0=Angry, 1=Disgust, 2=Fear, 3=Happy, 4=Sad, 5=Surprise, 6=Neutral). Model Link: <https://github.com/Tushar1224/FACE-SENTIMENT-DETECTOR-MODEL-CNN>

Product Recommending System:

It gives 10 most similar product for a user using Jaccard Similarity.Here Jaccard similarity is used to find the similarity between 2 products for different users.
